Robert Downie  
Managing Director

Peter Klatt  
Engineering Manager

Adriana Downie  
Technical Manager

Warren Scott  
Workshop Manager

Joy Noble  
Office Manager

**Legal Counsel**  
Taperell Rutledge

**Accountant**  
Swan and Associates

**Auditor**  
Grant Thornton, LLP

## **BEST ENERGIES AUSTRALIA**

### **Essential Technologies Powering Biofuels**

BEST Energies Australia engineers specialty green energy solutions for customers' waste and energy challenges by tapping proprietary technologies and more than 20 years of research and development experience. BEST Australia provides superior support to BEST Energies' customers in the Asian Pacific region.

#### **BEST Energies Australia is a technology company.**

Through our family of companies BEST Energies Australia holds a portfolio of proprietary key technologies that significantly improve the economics of pyrolysis and gasification of biomass streams. These advancements are essential for the creation of clean energy alternatives to traditional oil and coal based fuels. By bringing together the leading pyrolysis experts from around the world, with more than 20 years of research and development experience, we have created a rich, patentable pipeline of productivity and efficiency enhancement and 1st mover products.

We are part of the BEST Energies family of companies which offers economically viable answers to the interrelated problems of declining oil and gas reserves, greenhouse gas production and global warming. By combining proprietary biomass technologies with proven production solutions BEST is building distributed, clean energy production networks for our customers. Our solutions, focus on using renewable bio-based resources, helping the environment through preventative management of the excessive biomass waste streams which are responsible for many of the problem greenhouse gases. By converting these waste streams into a stable form the byproduct is an effective carbon sequestration mechanism.

#### **BEST Energies Australia is a specialty solutions provider.**

When our customers are faced with waste management and green energy generation challenges we provide integrated bioenergy solutions engineered to their specific needs. The distributed solutions we create allow production near biomass sources and close to consumption centers. Because of our scalability, we have clean energy solutions for all commercial and governmental producers and users of energy and for all producers of biomass and biowaste products.

As a waste management instrument, our systems allow for the expansion of industries constrained by environmental regulations. BEST Energies Australia's customers come seeking solutions for their existing industrial sectors needs. We are also well positioned to serve the needs of BEST Energies' customers in the Asia Pacific region.

#### **BEST Energies Australia is creating the bioenergy future.**

As global demand for energy and concerns over its source increase, our solutions will continue to grow in value. Because our solutions are focused on renewable bio-based resources, our customers will benefit from maximizing their existing local resources. BEST Energies Australia through research, acquisition and joint venture, is uniquely positioned to be the technological leader in all areas of biofuels.

#### **BEST Energies Australia is creating a great company.**

More than our technologies and solutions, the core value of BEST Energies Australia is the people who work here. BEST Energies Australia is creating a great place to work and build careers through valuing and rewarding innovation and dedication. As a company we demand the highest ethical standards of ourselves and we encourage every employee to be and do his or her personal best.

As a technological leader with high growth potential, BEST Energies Australia is a great place to invest. Our future is being built on our rich source of patentable technologies, biofuel solutions for the greenhouse challenge as well as our pipeline of productivity and efficiency enhancements and 1st mover products. A sustainable business model and partnering with complementary industry partners are positioning BEST Energies Australia to be the market leader. We offer a valuable investment in a high growth market with excellent near term return potential.

**BEST Energies** is a family of companies that are creating local answers for global concerns.

**The BEST Energies family of companies** offers economically viable answers to the interrelated problems of declining oil and gas reserves, greenhouse gas production and global warming.

**BEST BioDiesel** technologies increase the reaction rate over industry standard biodiesel systems. BEST BioDiesel offers continuous flow decanting, improved washing processes, enhanced recovery of methanol and world class process water sewer discharge levels.

**BEST Pyrolysis** technologies allow the concurrent production of multiple energy streams including: syngas for electrical generation; char for a pelletized fuel, green coal, soil enhancement or an activated filter material; and waste heat for re-use in production and export to other processes.
